2nd June 2021

Kleos Polar Vigilance Mission Satellites dispatched to Cape Canaveral for Launch

Kleos Space S.A (ASX:KSS, Frankfurt:KS1, Kleos or Company), a space-powered Radio Frequency Reconnaissance data-as-a-service (DaaS) company confirms the successful dispatch of its cluster of four Polar Vigilance Mission satellites (KSF1) from Delft in the Netherlands to Cape Canaveral for a launch onboard a SpaceX Falcon 9, under a rideshare contract with Spaceflight Inc, no earlier than June 2021. The satellites have been built by small satellite specialist Innovative Solutions In Space B.V (ISISPACE).

The Polar Vigilance Mission will provide global data that will increase Kleos overall coverage density in the equatorial region and also cover areas North and South of the Kleos Scouting Mission satellites which successfully launched on in November into a 37 degree inclined orbit.

Kleos uses clusters of four satellites to collect radio transmissions over key areas of interest around the globe and after processing a geospatial data product is delivered to analytics and intelligence entities for government and commercial use - efficiently uncovering data points of human activity on land and sea.

The Kleos clusters enable up to six antenna pairs to be used in proprietary multilateration algorithms – aiding data accuracy.

Kleos CEO Andy Bowyer said, “ISISPACE have done an incredible job delivering four satellites in a very short time period to our exacting standards, we look forward to them entering service in our growing constellation – more satellites, means more data for our customers increasing their insight into human activity in key areas of interest.”

This announcement has been authorised by Andy Bowyer, CEO of Kleos Space S.A.

About Kleos Space S.A.

Kleos is a space enabled, activity-based intelligence, data as a service company based in Luxembourg, US and UK. Kleos aims to guard borders, protect assets and save lives by delivering global activity-based intelligence and geolocation as a service. The first Kleos satellite system, known as Kleos Scouting Mission (KSM), will deliver commercially available data and perform as a technology demonstration. KSM will be the keystone for a later global high-capacity constellation. The Scouting Mission will deliver targeted daily services with the full constellation delivering near-real time global observation – www.kleos.space
